MARRIAGE COMPATIBILITY REPORT

Boy & Girl

Ashtakoot Guna Milan · Vedic Compatibility Analysis

Favourable

The overall compatibility is traditionally considered positive, although some individual factors may require attention. Reviewing the individual kootas gives a clearer picture than the total score alone.

Ashtakoot Guna Milan

Eight compatibility factors from classical Vedic matching, scored from both charts

KOOTA	MATCH STRENGTH	SCORE	WHAT IT MEASURES
Varna		1 / 1	Compares each partner's traditional Varna, a classical fourfold classification (Brahmin, Kshatriya, Vaishya, Shudra), and evaluates their relative Varna ranking within the Ashtakoot system.
Vasya		0.5 / 2	Compares the traditional Vasya grouping of each partner's Moon sign, classically associated with mutual attraction and the balance of influence between partners, not a prediction of how the relationship will actually play out.
Tara		1.5 / 3	Counts the distance between the partners' birth stars, traditionally associated with general wellbeing and the overall compatibility of the pairing.
Yoni		3 / 4	Compares the animal symbol of each partner's nakshatra, traditionally read as a measure of physical and temperamental compatibility.
Graha Maitri		0.5 / 5	Assesses the traditional friendship between the planetary rulers of each partner's Moon sign, associated with mental compatibility, understanding and communication.
Gana		6 / 6	Groups each partner's nakshatra into a temperament class (Deva, Manushya, or Rakshasa) and compares how naturally those temperaments coexist.
Bhakoot		7 / 7	Measures the angular relationship between the two Moon signs, traditionally associated with challenges relating to family harmony and material wellbeing.
Nadi		8 / 8	Carries the highest weight in the traditional Ashtakoot system (8 of 36 points). Traditionally associated with health, progeny and family lineage.
Total		27.5 / 36	Favourable

Dosha Analysis

The two doshas checked by classical Ashtakoot matching

Nadi Dosha

NOT PRESENT

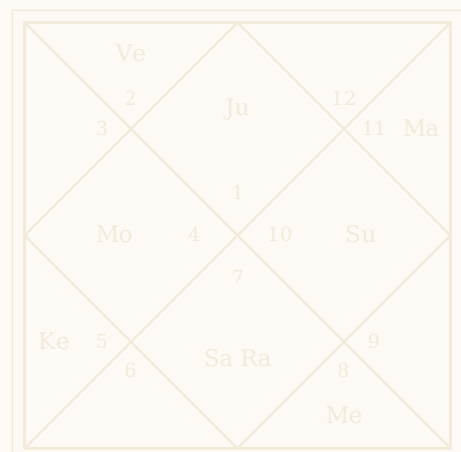

The partners belong to different Nadi groups, so no Nadi Dosha is identified here. Since Nadi carries the highest weight among the eight kootas, a full Nadi score is traditionally considered a favourable result within the Ashtakoot system.

Bhakoot Dosha

NOT PRESENT

The Moon signs are not in an afflicted angle from each other, so no Bhakoot Dosha is identified here.

Mangal Dosha

Classified from the Lagna under the RashiDaily convention. The Moon and Venus are shown as additional traditional checks and do not change the result.

Boy
NOT PRESENT

Reference	Mars in house	Result
Lagna primary	10	Not detected
Moon	3	Not detected
Venus	10	Not detected

Under the convention used by this report, Mars is not in the 1st, 2nd, 4th, 7th, 8th or 12th house from the Lagna, so Mangal Dosha is not identified in this chart. The Moon and Venus checks are shown for reference and do not change this result.

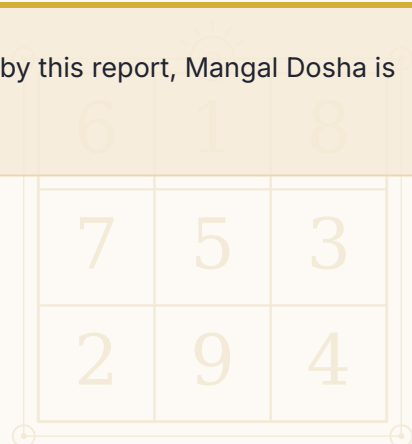

Girl
NOT PRESENT

Reference	Mars in house	Result
Lagna primary	11	Not detected
Moon	3	Not detected
Venus	2	Detected

Under the convention used by this report, Mars is not in the 1st, 2nd, 4th, 7th, 8th or 12th house from the Lagna, so Mangal Dosha is not identified in this chart. The Moon and Venus checks are shown for reference and do not change this result.

Not identified in either chart. Under the convention used by this report, Mangal Dosha is not identified from the Lagna in either chart.

Nakshatra Factors

Four traditional checks on the two Moon nakshatras, reported separately from the 36-point score

FACTOR	RESULT	MEANING
Rajju Boy: Kati Girl: Kantha	No Rajju dosha	The two Moon nakshatras fall in different Rajju groups, which traditional porutham matching treats as agreement on this factor.
Vedha	No Vedha	The two Moon nakshatras do not form a classical Vedha pair. Some traditions recognise further Vedha types; this report checks the classical pairs only.
Mahendra Count from the girl's nakshatra: 14	Mahendra not present	Counted from the girl's nakshatra, the boy's does not fall at one of the Mahendra positions. Mahendra is a favourable factor when present; its absence is not described as a dosha.
Stree Deergha Count from the girl's nakshatra: 14 (present above 13)	Stree Deergha present	Counted from the girl's nakshatra, the boy's is more than 13 places on, which meets the Stree Deergha threshold this report uses. Porutham matching traditionally associates Stree Deergha with the wife's wellbeing and prosperity.

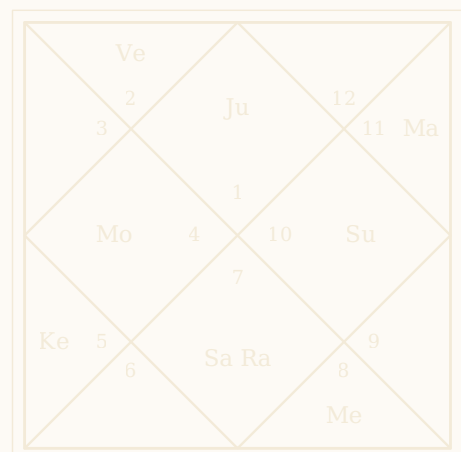

Overall Assessment

27.5 of 36 gunas · Favourable

The overall compatibility is traditionally considered positive, although some individual factors may require attention. Reviewing the individual kootas gives a clearer picture than the total score alone.

About This Report

This is a structured traditional Vedic astrology compatibility analysis. It is not a prediction of whether a marriage will succeed.

Method. Planetary positions are calculated with the Swiss Ephemeris using the Lahiri ayanamsa, and verified against NASA JPL Horizons to within one arcsecond. Compatibility is scored using the eight-factor Ashtakoot Guna Milan system out of 36 points.

Scope. Ashtakoot is one traditional matching framework among several. Mangal Dosha is classified from the Lagna under the RashiDaily convention, with the Moon and Venus shown as additional checks; other traditions use all three, or a different house set, and may reach a different result. Nadi and Bhakoot dosha are checked against the exceptions most traditional sources agree on, and an exception that applies is shown beside the dosha without changing the 36-point score; other traditions apply further exceptions.

Guidance. Remedies described are traditional practice, offered for information. Whether any remedy applies to a particular couple depends on the complete horoscope and should be confirmed with a qualified astrologer.
